Education

University of Information Technology, (VNU-HCM) HCMC, Vietnam
Bachelor of Software Engineering; GPA: 9.38 *Sep 2023 – Present*

Achievements

- **Academic Excellence Scholarship:** Awarded the university's Merit Scholarship for outstanding academic performance across four semesters.
- **Honors Semesters:** Recognized as an Honors Student in: Semester 1–2 (2023–2024), Semester 1 (2024–2025, 2025–2026).

Certifications

- **TOEIC – 950 (Listening & Reading) — 350 (Speaking & Writing)** *Issued: Oct 2024*
  ETS

Skills Summary

- **Programming Languages:** TypeScript, C++, Java
- **Frameworks & Libraries:** NestJS, Spring Boot, FastAPI
- **Tools & Platforms:** Git, Cloudinary, TypeORM, Docker, Kubernetes
- **Databases:** PostgreSQL, MySQL

Projects

Aegis – Telecom Alert System *Jun 2026 – Jul 2026*
Software Developer — Personal Project

- **GIS & Event-Driven Architecture:** Used PostgreSQL/PostGIS (GiST R-Tree) and Redis caching to query and serve spatial mapping data for 10,000 telecom stations under 12ms. Decoupled real-time WebSocket STOMP map updates from Telegram alerts via ActiveMQ Classic with custom RedeliveryPolicy and Dead Letter Queue (DLQ).
- **Risk Engine & SLA Automation:** Developed automated schedulers to pull weather forecasts (via Open-Meteo) and global disaster events (via UN GDACS geofencing). Implemented a multi-factor risk quantification model based on the UNDRR framework (integrating hazard, exposure, and vulnerability) and automated SLA incident escalations (SEV1–SEV4) with dynamic playbooks.
- **SRE & Observability:** Automated infrastructure provisioning and configuration management using Terraform and Ansible. Conducted load tests using k6, validating peak system throughput up to 2,150 req/s with 0% error rate under spike stress. Configured JVM G1GC limits and integrated Prometheus, Loki, and Tempo for distributed tracing.
- **Key Technologies:** Java 21, Spring Boot 3, PostgreSQL/PostGIS, Redis, ActiveMQ Classic, Next.js, Terraform, Ansible, Prometheus, Loki, Tempo, Docker, k6

FShop – AI-Powered Fashion E-Commerce Platform *Sep 2025 – Jan 2026*
Software Developer — Team Project (2 members)

- **Architecture & Core E-commerce:** Built a modular **NestJS** backend for product/variant management, cart, wishlist, orders, coupons, reviews, inventory, user profiles, and admin dashboard statistics.
- **Security & Payment Integrations:** Implemented JWT authentication, Google OAuth2, Redis-based refresh token rotation/revocation, role guards, password reset, and integrated PayPal checkout with webhook verification.
- **Real-Time & AI Features:** Developed Socket.IO-based chat, notifications, and livestream shopping; connected an AI microservice for chatbot, recommendation, image/voice search, moderation, and virtual try-on.
- **Key Technologies:** NestJS, TypeScript, PostgreSQL, TypeORM, Redis, Socket.IO, Docker, MinIO, Swagger
